Summary

I started my career as a full-stack developer, but over time I found myself more interested in front-end development, so I decided to focus on that path. I have around 2.5 years of experience working with Angular and later transitioned to React after seeing its growing adoption in the industry. I enjoy both learning and sharing what I know with others. I'm particularly interested in refactoring legacy code and improving existing systems to make them more maintainable and efficient.

Experience

07/2022– Present **Frontend Software Engineer, Atlassian, Ankara, Turkey**

- Worked on the consolidation of Opsgenie into Jira, rebuilding key pages from scratch within Jira.
- Built shared components and services used across multiple teams in a platform team.
- Contributed to scalable and reusable frontend architecture.
- Took end-to-end ownership of features, from discovery to delivery.
- Collaborated closely with designers, content designers, product managers, and engineers.

12/2020– 08/2022 **Frontend Engineer, COFE App, Istanbul, Turkey**

- Managed and optimized customer administration panels and multi-platform hybrid applications for the company's flagship mobile ecosystem.
- Led the full-scale reconstruction and refactoring of legacy portals, improving system architecture and maintainability from the ground up.
- Designed and implemented specialized hardware integration for Sunmi devices, developing custom printing features via ESC/POS commands to streamline transaction-to-print workflows.

06/2018– 12/2020 **Frontend Developer, Beyn Technology, Istanbul, Turkey**

- Led the migration of a legacy, high-complexity AngularJS codebase to modern Angular, significantly reducing technical debt and improving system maintainability.
- Architected reactive components using the RxJS and Angular's component-based architecture, specifically targeting high-traffic user interaction modules.

03/2017– 06/2018 **Full Stack Developer, Webbilir, Istanbul, Turkey**

- Engineered tailor-made web applications using the .NET MVC framework to meet diverse client-specific software requirements.
- Architected a "Greenfield" engagement platform from scratch, serving as a centralized hub for real-time feedback and communication between brands and their user base.

Education

2020 **Bachelor of Science in Computer Engineering, Istanbul Technical University, Istanbul**

Skills

Frameworks React, React Native, Angular
Languages TypeScript, JavaScript, GraphQL
Tools Redux Toolkit, Apollo Client, Relay
Tests Jest, React Testing Library, Cypress, Playwright
Bundlers Webpack, Vite, Parcel
Styling SASS/SCSS, Tailwind CSS, Styled Components, MUI, Ant Design, Atlaskit

Publications

Medium **Dynamic Elements in Angular with Best Practice**
